Edge Employment Screening Integrates with Paylocity

Reduce onboarding administration by syncing employee records automatically with Paylocity.

Edge Employment Screening Announces Integration with Paylocity

Melbourne, Florida — Edge Employment Screening, a background screening provider recently recognized for service and customer satisfaction in pre-employment screening, has announced a new integration with Paylocity (NASDAQ: PCTY), a leading provider of HCM, Finance, and IT solutions.

The integration connects Edge's screening platform directly with Paylocity, automatically syncing employee records between the two systems. For HR teams, that means no more re-entering the same information twice — new hire data flows through without the manual back-and-forth that typically slows down onboarding.

"At Edge, our motto is Listen, Learn, Deliver. We listen to our clients' needs and deliver efficient, compliant solutions tailored to their workflows," said Chad Stair, President of Edge. "This integration with Paylocity directly addresses our clients' need for speed and efficiency. By automating the sync of screening and employee records, we are helping organizations save hours of administrative work and get their teams working faster."

What This Means for HR Teams

Juggling background screening and onboarding across two separate platforms creates extra steps — and extra room for error. This integration takes that off HR's plate:

- Background check records sync automatically into Paylocity, cutting out duplicate data entry
- HR staff get time back to focus on work that actually requires their attention
- New hires move from candidate to active employee faster, with less friction along the way

A Note on Edge's Recent Recognition

The Paylocity integration comes on the heels of Edge being named a top pre-employment screening provider in the HRO Today Baker's Dozen, where it earned strong marks for service quality, breadth of offerings, and deal size. Edge's client services team is entirely U.S.-based.
